hykam@uwaterloo.ca ◇ UWaterloo ID: 20716434

INTERESTS

I am interested in graph theory and graph algorithms research, with a particular interest in the graph minor project, graph colouring, and optimization on graph structures. In addition, I am also keen on quantum computing and hope to learn more through courses like quantum information processing and algebraic graph theory in the upcoming term.

EDUCATION

University of Waterloo

Sep 2017 - Present

Currently in term 4A

- Double Major in Combinatorics & Optimizations and Computer Science
- Minor in Pure Mathematics
- Term Dean's Honours List

Relevant Courses

- Graph-theoretic Algorithms - CS762
- Algorithms for Graph Minors - CO749
- Algebraic Graph Theory - CO444
- Network Flow Theory - CO351
- Introduction to Graph Theory - CO342

Relevant Projects

- **Bounded Queue-number in Planar Graphs (CS762)** - [Project Page](#)
Explore a recent proof by Dujmović et al for a 20-year old conjecture on whether the queue-number of planar graph is bounded.
- **Tangles are Decided by Weighted Vertex Sets (CO749)** - [Project Page](#)
Explore a partial solution by Elbracht et al to an open problem by Diestel, who asked whether we can find a vertex subset X that can definitively characterize a tangle by seeing which side of a low order separation has more vertices in X . We further explore the possibility improving the weight function to be polynomially-bounded by the number of vertices.

PUBLICATION

- **UBCIS: Ultimate Benchmark for Container Image Scanning**,
with Shay Berkovich and Glenn Wurster
Published in 13th USENIX Workshop on Cyber Security Experimentation and Test (CSET 20).
<https://www.usenix.org/conference/cset20/presentation/berkovich>
- **bioSyntax: Syntax Highlighting For Computational Biology**,
with A. Babaian, et al.
Published in BMC Bioinformatics 19, 303 (2018).
<https://doi.org/10.1186/s12859-018-2315-y>

RESEARCH EXPERIENCE

University of Waterloo - Symbolic Computation Group

Undergraduate Researcher - Supervised by Dr. Armin Jamshidpey

May 2020 - Sep 2020

Waterloo, Canada

- Experiment with J -ideal and Smith Normal Form using SAGE.
- Understand relationships between matrix normal forms and ideals.

BlackBerry - Security Research Group

Security Research Intern

January 2020 - April 2020

Waterloo, Canada

- Researched and designed a universal benchmark to quantitatively measure the effectiveness and accuracy of container image scanners
- Analyzed techniques of image inspection and vulnerability scanning through open source technologies
- Designed a universal import framework for Anchore Engine to extend our scanning capabilities
- Researched on utilizing machine learning for fuzzing algorithmic complexity vulnerabilities (ACV)
- Presented to the security research group on current developments of machine-learning-based fuzzing and fuzzing techniques for ACVs, along with potential problems, experiments, and optimizations.

WORK EXPERIENCE

GTS

Software Engineering Intern

Sep 2020 - Present

New York, US

- Working on performant C++ and Python code for the core trading engine

Zenefits

Software Engineering Intern

May 2019 - Aug 2019

Vancouver, Canada

- Developed new permission services in Django with extensive unit tests to guard against unauthorized edits of review data
- Designed a sequential document update service using a distributed message queue system Celery

Horizn

Web Developer Intern

May 2018 - Aug 2018

Toronto, Canada

- Wrote automation scripts in Python to scrape data from files and database into JSON files

AWARDS

- First place in HackSeq 2017 bioinformatics competition in UBC
- Honourable mention in Canadian Computing Competition Hong Kong 2017
- University of Waterloo President's Scholarship

SKILLS

Programming Tools

Python, C++, SAGE, Scheme

Git, C++ tools (i.e. GCC, GDB, Valgrind), Docker, Linux, Jupyter
